

Y4 – Statistics – Thursday

LO: I can collect, present and interpret data.

In today's lesson, I'd like you to do three things:

1. Collect data in a table
2. Represent the data in a chart (pictogram, bar chart or other chart)
3. Write five questions for someone to answer about the data

Here are a few ideas for the data you could collect:

- Favourite colour of family and friends.
- Each family member tosses a coin ten times and you record the results for each person
- Height in cm of family member
- Invent some data about something you're interested in

I'm sure you will come up with good ideas!

Finally, if you can, email me your charts and questions and I will set a lesson next week where we're answering **your** questions about **your** data!
